

DataFabric Manager Data ONTAP plug-in Install Instructions

To download and install the DataFabric Manager Data ONTAP plug-in software on the Windows®, Solaris, or Linux system that you want to use as the DataFabric Manager server, complete the following steps:

1. Download (filerconfig_Windows.zip or filerconfig_SunOS.zip or filerconfig_Linux.zip) the version of the DataFabric Manager Data ONTAP plug-in that you need.

2. From the DataFabric Manager command line, enter

```
dfm plugin add [-f] { path | URL }
```

3. You can omit the -f switch, unless you want DataFabric Manager to reinstall a plug-in that has already been installed.
4. Any path or URL that can be interpreted or resolved by your system and network is valid.

```
Example: dfm plugin add  
http://web.company.com/~jsmith/filerconfig_Windows.zip
```

```
Example: dfm plugin add /server/jsmith/filerconfig_SunOS.zip
```

5. To confirm that the plug-in is installed from the DataFabric Manager command line, enter

```
dfm plugin list
```
