## Statemate 4.5.0.1 Defects Fixed List

### Maintenance Release (Build 248311)

---

|               |  |
|---------------|--|
| Defect 73812  | External files are not checked in to databank after import             |
| Defect 109118 | Functional Mode of ActivityInterFace Reports shall include Environment |
| Defect 109371 | Can not write enforced flag in data import                             |
| Defect 109372 | Can not update external file though data import api                    |
| Defect 109374 | It is not possible to create a workarea on two different PC            |
| Defect 109430 | Export does not have overwrite option                                  |
| Defect 109979 | Limitation in Scenario Defintion Table                                 |
| Defect 110105 | Statemate crashes when generating code                                 |
| Defect 110152 | API PM Function Enhancements   |
| Defect 110202 | Dataport causes crashes when it falies to get a license                |
| Defect 110206 | C code generator crashes on this example                               |
| Defect 110220 | Check Model Completeness Warning Explosion                             |
| Defect 110221 | check Model errors that previously not reported                        |
| Defect 110225 | simulator crash when building simulation                               |
| Defect 110233 | simulator crash when building simulation 2                             |
| Defect 110270 | Simulation crashes   |
| Defect 110271 | chart crash when Check Modelling with bad dataflow                     |
| Defect 110296 | Using Statemate on distant sites less than 40 miles                    |
| Defect 110320 | Check Model crash with COMMS model                                     |
| Defect 110321 | Enum Default Values not correctly resolved in model                    |
| Defect 110327 | Subtype Ranges Definition in Enum Subtype Properties are misleading    |
| Defect 110328 | Info shows multiple enum value PRECOMBAT as Unresolved element         |
| Defect 110337 | Wrong Default Value shown in Simulation                                |
| Defect 110402 | Simulation crashes on each rebuild                                     |
| Defect 110422 | List Tail Error Handling And Lines                                     |
| Defect 110434 | MicroC Code Generator crashes context variables                        |
| Defect 110450 | CG crash after code generation   |
| Defect 209363 | Internal Activity Mismatch   |
| Defect 210233 | Performance Issues with New Licencing System                           |
| Defect 221095 | MicroC CG crashes on each 2nd build                                    |

## Statemate 4.5 Defects Fixed List

### Patch Release (Build 238048)

---

|              |   |
|--------------|---|
| Case 5024126 | Defect 110203 Check model crashed.  |
| Case 1065464 | Defect 110091 Code generated incorrectly for init of conditions.                    |
| Case 3041505 | Defect 110101 Generate Generic Binding Data in separate structure.                  |
| Case 3041506 | Defect 110148 "External" events not ignored with "Ignore External Binding" checked. |
| Case 7031613 | Defect 110226 Want to automatically insert preprocessor flags around macro_def.h.   |
| Case 3042934 | Defect 110243 MicroC Code Generator hangs up.                                       |

### Initial Release (Build 236338)

---

|              |  |
|--------------|--|
| Case 5022883 | Defect 109869 Automatic Sequence-Diagram Generation does not work as expected.         |
| Case 5022736 | Defect 109843 Statemate crashed when deleting a chart.                                 |
| Case 5021622 | Defect 109341 Dataport returns the incorrect values into Information Flow consists of. |
| Case 5022155 | Defect 109635 Case sensitivity issues when using Dataport.                             |
| Case 3041017 | Defect 217433 Renaming enumerated value does not work.                                 |
| Case 4053560 | Defect 109952 XMI install problem with Java 1.6.                                       |
