

IBM DS8000 Storage Replication Adapter
Version 2.3.1

Release Notes

First Edition (January 2016)

This edition applies to version 2.3.1 of the IBM DS8000 Storage Replication Adapter and to all subsequent releases and modifications until otherwise indicated in a newer publication. Newer document editions may be issued for the same product version in order to add missing information or amend typographical errors. The edition is reset to 'First Edition' for every new product version.

Overview

The IBM® DS8000® Storage Replication Adapter (SRA) is a software add-on that integrates with VMware vCenter Site Recovery Manager (SRM) solution and enables SRM to perform failovers with supported storage systems.

The IBM DS8000 SRA extends SRM capabilities and uses replication and mirroring as part of the SRM comprehensive Disaster Recovery Planning (DRP) solution. VMware administrators can automate the failover of a storage system at the protected (primary) SRM site to a storage system at a recovery (secondary) SRM site.

Download site

You can download the IBM DS8000 SRA from the VMware website.

<http://www.vmware.com/go/download-srm>

Compatibility and requirements

This section specifies the compatibility and requirements of version 2.3.1 of the IBM DS8000 SRA.

Supported storage systems

The IBM DS8000 SRA supports the following storage products.

Storage system	Microcode version
IBM DS8700	6.3.2
IBM DS8800	6.3.2
IBM DS8870	7.0 to 7.5
IBM DS8880	8.0

Required VMware server software

The following server software must be installed at both the protected (primary) and recovery (secondary) sites:

- VMware Site Recovery Manager 5.x, 6.0, or 6.1

Required VMware client software

The following software must be installed on the administrator client station:

- VMware vSphere Client 5.0, 5.1, or 5.5
- VMware vSphere Web Client 5.8, 6.0, or 6.1

Change log

This section summarizes the changes made in different version releases of the IBM DS8000 SRA.

Version 2.3.1 (January 2016)

Version 2.3.1 adds support for IBM DS8880 version 8.0 and includes the following enhancements.

Ticket ID	Description
SRADSK-261217	Enhancement: Extent Space Efficient (ESE) volumes support added, for when creating flash copies in Test, Backup Target, and Reprotect.
SRADSK-261218	Enhancement: If the SRA is running in non-preconfigured mode, the GM Flashcopy is removed on the source site after Reprotect runs successfully.

Version 2.3.0 (November 2014)

Version 2.3.0 included the following enhancements and fix.

Ticket ID	Description
SRADSK-261140	Enhancement: The Check Configuration tool determines whether the configuration is correct and troubleshoots problems.
SRADSK-261182	Enhancement: M-N Metro Mirror enables Peer-to-Peer Remote Copy (PPRC) connections to more than one DS8000 SRA.
SRADSK-261177	Fixed: IBM DS8000 SRA will not suspend Metro Mirror for a Metro Global Mirror function during testFailover. Note: This fix stops Tivoli® Storage Productivity Center for Replication (TPC-R) from operating incorrectly and affecting other unrelated replications.

Version 2.2.1 (December 2013)

Version 2.2.1 added support for IBM DS8000 version 7.2 and the following enhancement.

Ticket ID	Description
SRADSK-261183	Enhancement: Support for Transport Layer Security (TLS) 1.2.

Version 2.2.0 (May 2013)

Version 2.2.0 added the following enhancements and fixes.

Ticket ID	Description
SRADSK-259754	Enhancement: Improved lock mechanism to avoid conflicting with new volume IDs.
SRADSK-261184	Enhancement: The Name Filter parameter limits device discovery to a subset of devices that are managed by SRM. This parameter can be used to limit the discovery, for example, to replicated volumes or session IDs whose names begin with a specified string.

Ticket ID	Description
SRADSK-258327	Fixed: DiscoverDevices returns incorrect Peer-to-Peer Remote Copy (PPRC) direction. An error occurs during Global Mirror failover or test failover, when one recovery plan is in the process of reprotect and another recovery plan invokes DiscoverDevices .
SRADSK-260190	Fixed: DiscoverDevices returns incorrect PPRC direction. An error occurs during Global Mirror reprotect, where some PPRCs within the same Global Mirror might experience reprotect while others might not.

Version 2.1.0 (March 2013)

Version 2.1.0 added the following features:

Metro Mirror

Metro Mirror between the storage systems.

Global Mirror

Multiple Global Mirrors between the storage systems.

Metro Global Mirror

Metro Global Mirror between the storage systems.

Note: The DS8000 SRA does not support failover to the intermediate site.

Master Subordinate Global Mirror

Global Mirror with master and subordinate between the storage systems.

Tivoli Storage Productivity Center for Replication

Global Mirror and Metro Mirror practice mode that is managed by TPC-R.

Preconfigured failover

Pre-configured environment settings for data migration.

Non-preconfigured failover

Non-preconfigured environment settings for data migration.

Space Efficient Volume

Space Efficient FlashCopy® target volume.

Known issues

This section details the known issues in version 2.3.0, along with possible workarounds (if workarounds are available).

Ticket ID	Description
SRADSK-261207	<p>If the IBM DS8000 on the protected site is enabled for VMware vStorage APIs for Array Integration (VAAI) Atomic Test & Set (ATS) and the DS8000 on the recovery site is ATS-disabled or does not support VAAI, VMWare SRM fails to run Test Failover and Failover. This result is because the copied datastore on the recovery site cannot be mounted successfully. For example, if you have one DS8000 R7.3 on which VAAI is enabled by default on the protected site and one DS8000 R6.3 on which VAAI is not supported on the recovery site, this problem occurs. You can find the DS8000 VAAI support matrix in the the compatibility guide (http://www.vmware.com/resources/compatibility/detail.php?deviceCategory=san&productid=1223).</p> <p>Workaround: Disable the VAAI ATSONly on the VMware Virtual Machine File System (VMFS) datastore on the DS8000 on the protected site and run the SRM operation again. The steps can also be found on the VMware Knowledge Base (http://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKC&externalId=2030416)</p> <p>The following workaround command can be used:</p> <pre>vmkfstools --configATSONly 0 /vmfs/devices/disks/device-ID :Partition</pre> <p>Where device-ID is the NAA ID of the LUN on which the VMFS datastore was created and Partition is the partition number on which the VMFS datastore was created. For example:</p> <pre>vmkfstools --configATSONly 0 /vmfs/devices/disks/naa.6006016055711d00ce5e65664ee011:1</pre>

Related information and publications
